

AI-assisted development has put applications and APIs on daily release cycles, and every integration, microservice, and agent connects through an API. Periodic AppSec can't keep up, leaving shadow apps and APIs untested. TotalAppSec discovers every web app and API you own, tests what's deployed, confirms what's exploitable, and closes it with automated remediation workflows.

One Platform for Web Apps and APIs Unified web app scanning, API security, and malware detection on a single platform so one risk score ranks every finding.	AI-Powered Scan Optimization AI profiles and self-tunes testing, cutting scan time by 50% and reducing scanner load, so coverage keeps pace with releases.	Continuous Compliance Evidence Attestation-ready reports sent directly for ASV validation. Evidence generation for PCI DSS, GDPR, HIPAA, and OWASP.
