ETM IDENTITY

See every identity, find every attack path, fix what matters most first.

Today, attackers don't break in—they log in, exploiting permissions. The 2026 Identity Security Paradox reveals that 46% of organizations lack adequate identity governance. Identity and Access Management (IAM) manages access, not identity posture. Built into Qualys Enterprise TruRisk™ Management (ETM), ETM Identity discovers identities, maps attack paths, and correlates risk into a single TruRisk™ score.

Complete Identity Visibility

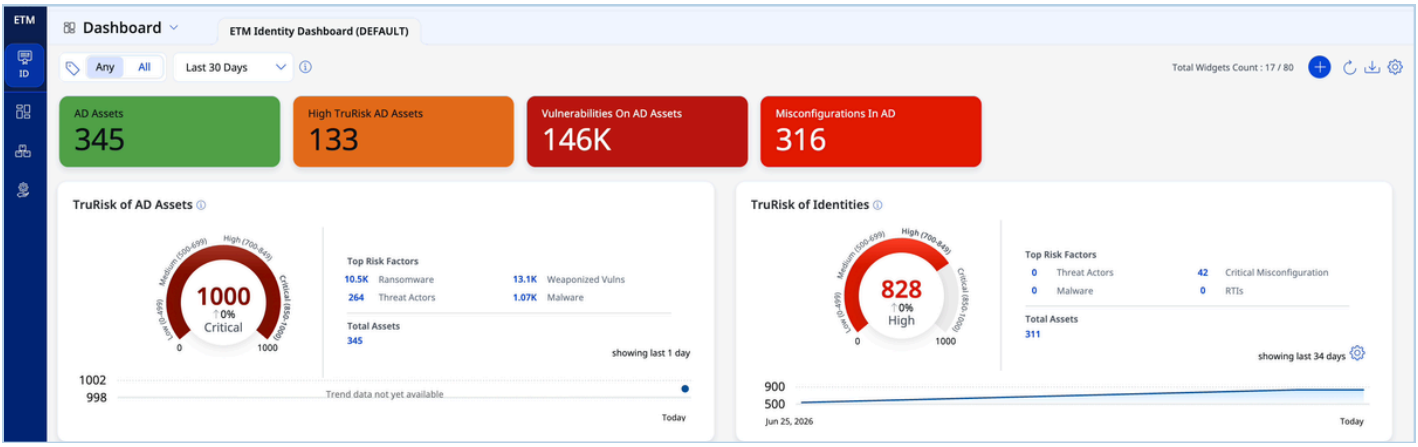

- Identity Inventory unifies users, groups, and local identities with risk criticality and access context.
- Native Entra ID & Okta Connectors, Cloud Agent, and the Agentless AD Connector enable discovery across hybrid environments.

Granular Attack Path Analysis

- AD Attack Path Analysis uncovers risky permission chains, while AD Blast Radius Analysis maps the potential impact across affected users, groups, systems, and resources.
- Domain Trust Map visualizes trust relationships and attack paths, while Foreign Security Principal detection flags risky external access and orphaned trusts.

Context-Rich Risk Scoring

- Identity TruRisk™ correlates identity and asset risk, while Identity Insights uncovers toxic permissions and AD Real-Time Monitoring flags suspicious logons and privilege abuse.
- AI Remediation Summary recommends fixes. Risk Acceptance Workflow manages false positives. ETM Integration unifies identity and enterprise risk.

One Risk Language, Faster Risk Prioritization
Score and prioritize identity risk within the TruRisk™ framework for vulnerabilities and misconfigurations.

Audit-Ready Compliance & Governance
Map identity controls to DISA, CIS, HIPAA, GDPR, and PCI frameworks.

Single Pane of Glass Across Your Tech Stack
Unify identity risk signals from Qualys agents, sensors, and third-party tools in your Risk Operations Center.

Turn identity intelligence into measurable risk reduction. Start your 30-day free trial.
