SOLUTION BRIEF

# Technical Solution Overview TruRisk Eliminate™ for IT Ops

Frontier AI is accelerating the need to remediate validated exposures the same day because attackers are weaponizing with hours of disclosure. The volume of vulnerabilities keeps growing, the window to act keeps shrinking, and traditional remediation workflows weren't built for this pace. The 2026 Verizon DBIR calls out that vulnerability exploitation has already moved at the top attack vector for initial access. And the median time to remediate a known-exploited vulnerability has climbed to **43** days, up from **32** the year before, a number IT owns, even when the bottleneck isn't yours.

IT teams need a purpose-built cyber security zero-day remediation solution with autonomous capabilities to continuously reduce risk with operational resiliency.

TruRisk Eliminate was built for this exact need as an essential companion to any regular IT patching solution.

## 5 ways TruRisk Eliminate reduces operational pressure on IT

### 1. Remediate when traditional patching isn't an option

Some vulnerabilities have no patch to deploy — no vendor fix, end-of-life systems, production too fragile to touch. Those vulnerabilities just sit on your estate.

TruRisk Eliminate deploys pre-validated configuration fixes and EOL software removal workflows, developed and tested by Qualys TRU, through the Cloud Agent you already use. No fix to write. No new tooling. No new process.

**Result:** **40,000** .NET EOL vulnerabilities removed in **16** days. **27,000** WinVerifyTrust issues resolved in **3** days — no patches involved.

### 2. Neutralize exposure without breaking your maintenance window

When Security demands a same-day fix, IT is forced into emergency mode: unplanned CAB meetings, midnight shifts, and high production risk.

TruRisk Eliminate buys you time. It deploys safe, temporary mitigations that neutralize the exposure instantly, allowing you to delay the permanent patch until your next scheduled maintenance window. Your calendar stays intact.

**Result:** An immediate **85%** reduction in exposure via targeted configuration mitigations—completely eliminating emergency out-of-cycle deployments.

### 3. Scale patch deployments with zero rollback risk

A failed patch creates more disruption than the vulnerability it was meant to fix: rollbacks, extended windows, and after-hours scrambles all land on IT.

TruRisk Eliminate automatically scores each patch for deployment reliability through AI, routing low-risk updates for immediate rollout and staging higher-risk ones across your existing testing, pilot, and production rings.

**Result:** **250,000** workstations patched in **14** days with faster deployment cycles and significantly fewer rollout issues.

## 4. Tickets routed to the right owner. No guessing game

Most IT-security friction starts the same way: remediation requests arrive without enough asset context, and IT spends time validating whether action is even warranted.

TruRisk Eliminate applies risk intelligence and asset context, pulling ownership data from CSAM, before a ticket is ever created. Every task routes to the right IT owner, pre-populated with the context needed to act. No guessing. No reassignment cycles. No back-and-forth.

**Result:** **30%** lower MTTR and **40%** faster response times by eliminating manual cross-team coordination.

## 5. Meet strict compliance SLAs without production downtime

CISA KEV (Known Exploited Vulnerabilities) mandates leave zero room for delay, and missed deadlines quickly turn into compliance failures.

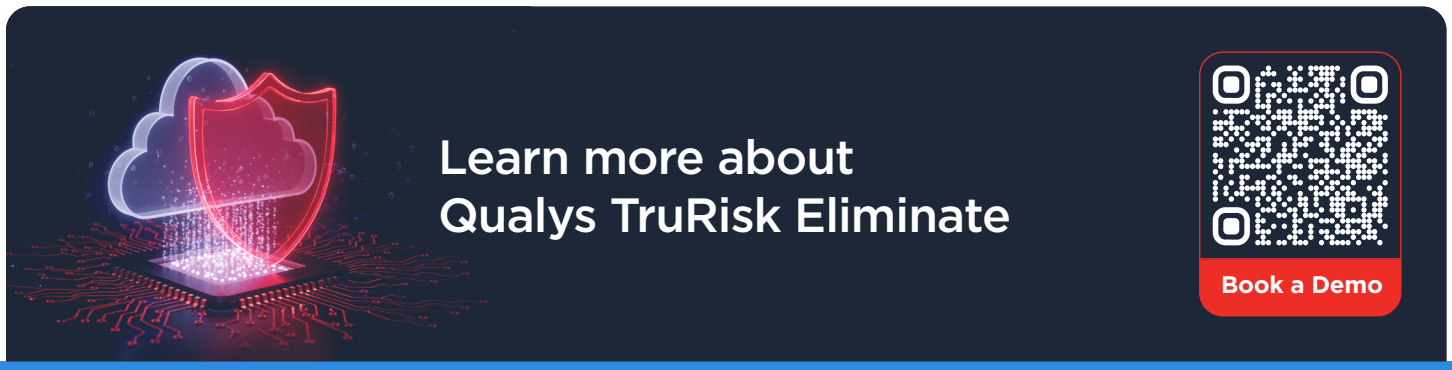
TruRisk Eliminate prioritizes CISA KEV and zero-day remediation within your SLA window, automatically logging every action for audit readiness. AI-driven prioritization keeps accelerating how fast these vulnerabilities get covered. Post-deployment resiliency checks confirm nothing broke in production.

**Result:** Near-complete CISA KEV coverage across all remediation paths — with audit-ready records generated automatically.

# Built for IT & Security Teams

TruRisk Eliminate gives IT and Security a shared platform for patch and patchless remediation, resulting in fewer emergencies, less ticket noise, fewer failed deployments.

**Proven at scale:** **150M** patches deployed. **40M** automated with less than **0.1%** rollback rate. **1M** mitigations, fixes, and isolations delivered.



**About Qualys**

Qualys, Inc. (NASDAQ: QLYS) is a pioneer and leading provider of disruptive cloud-based Security, Compliance and IT solutions with more than 10,000 subscription customers worldwide, including a majority of the Forbes Global 100 and Fortune 100. Qualys helps organizations streamline and automate their security and compliance solutions onto a single platform for greater agility, better business outcomes, and substantial cost savings. Qualys, Qualys VMDR® and the Qualys logo are proprietary trademarks of Qualys, Inc. All other products or names may be trademarks of their respective companies.
